

06 Demo Script

Client walkthrough script for v11.0.6

4-5 minute client demonstration

Time	What to show	Speaking point
0:00-0:30	Opening	AI can recommend and interpret. RAMIFY decides what the agent is allowed to do - and records why.
0:30-1:20	Guided Demo	Use the fast deterministic walkthrough to show the whole trust journey without model delay.
1:20-2:00	Live Shop free text	Type a natural request so LangGraph + Ollama + Llama identify a known catalogue product.
2:00-2:50	Five primitives	Show identify, resolve, status, verify and assess with input, output and milliseconds.
2:50-3:30	Agent comparison	The product truth stays fixed; different personas may make the permitted action stricter.
3:30-4:10	Receipt and tamper demo	Show Summary, Evidence Trail, Signed JSON, Verify and Tamper Demo.
4:10-4:40	Proof Pack / Technical	Show the environment proof and downloadable proof pack.
4:40-5:00	Close	This is synthetic and local. Production would need real integrations and protected key governance.

Backup plan

If Ollama is slow or offline, state that this is expected and continue with deterministic fallback. The trust decision is intentionally independent of the model.

Do not say

- Do not claim real products are certified.
- Do not say Llama makes the trust decision.
- Do not claim offline air-gap proof beyond local configuration evidence.
